Cast Iron Welding & Metal Stitching Repairs

Dredger Propellers

We were approached by a Scottish dredging company to undertake urgent repairs to two badly damaged propellers whilst the dredger underwent an overhaul—and were given just a week to complete the task!

There was severe wear on all the tips due to corrosion, and two tips had completely broken off!

A pattern was made of the propeller tip, and, following fusion welding of the same material to the two tips using our Lloyds approved welding procedures, we were able to fashion new propeller tips by cutting and grinding to shape.

Following the reshaping, the propellers

were sand blasted and given a coating of red oxide primer, ready to be refitted to the vessel.

For any urgent Marine repairs contact us for a free survey/quotation.

- Full Pressure Testing
- Full Crack Detection
- Fixed Cost Repairs
- Lloyds Welding Procedure
- 12 Months Guarantee
