Cast Iron Welding & Metal Stitching Repairs

## Cast Iron Window Sashes

We were contacted by a specialist contractor to carry out repairs and refurbishments to a number of original cast iron window sashes and door handles/latch sets for a Scottish castle undergoing renovation.

The privately owned historic house dating back to the 17<sup>th</sup> century is the only habitable castle on the shores of Loch Ness and is now exclusively used for private hire for weddings and corporate events following a previous restoration, including a number of traditional holiday cottages.

Repairs varied from stripping, cleaning and repainting, to cracks and missing pieces of cast iron window frame, and reinstatement of all pivots, cups and hinges. There was also the need for several newly cast replacement sashes, manufactured by our trusted foundry.

We undertook the required repairs using our Lloyds approved fusion welding procedures for cast iron giving a repair as strong - if not stronger - than the original material. These were then ground to match existing profiles, crack tested and blasted, before applying a coat of red oxide primer, and black top coat for the door handles/latches.

Once completed, all the window sashes and fittings were carefully repacked into their large wooden crate, ready for customer collection.

For any Architectural Restorations, please call us for a survey/quotation.

- On Site Inspection/Quotation
- Lloyds Welding Procedures
- Full Crack Detection
- Full Shot Blasting
- Recasting if needed
- Painting as Required
- 2 Year Guarantee
