Cast Iron Welding & Metal Stitching Repairs

## Elgamill Machine

When the Plant Engineer of a company manufacturing track for the underground railway system contacted us regarding a large crack opening up on an Elgamill machine (key in the process of manufacture), he requested the repairs be carried out urgently and in situ as the machine could not be removed.

So as to minimise the amount of time “out of action”, our engineers travelled to site and carried out the emergency repairs the next day by way of our approved Metal Stitching procedures, followed by grinding to correct profile before fully crack testing.

The machine was then ready to continue its service, with the minimum of disruption and at a fraction of the cost of a new machine.

*Another economical repair!*

For any Emergency Industrial Repairs, contact us for an initial survey/ quotation.

- Initial Survey/Quotation
- Metal Stitching
- Full Crack Detection
- Casting of Parts if Required
- 24 Hour Emergency Service
- All Work Guaranteed

*Breathing new life into  
damaged cast iron components*
