Cast Iron Welding & Metal Stitching Repairs

Lorraine-Dietrich Block

One of our international customers brought a Lorraine-Dietrich 6-cylinder block for an Alfa Romeo Tipo 6C over from Belgium to our workshop in Derbyshire for repairs and also modifications.

Lorraine-Dietrich was one of motoring history's pioneering brands, and ranked amongst the top half-dozen makes in the early 1900s. Its origins began in 1897 when railway carriage manufacturers De Dietrich started building cars at its plant in the Lorraine region of France. They ceased production of automobiles in 1935 when the plant returned to rail locomotives.

We undertook the welding repairs and modifications using our approved welding procedures for cast iron. All welds were then ground to the correct profile to the required specifications, before pressure testing to ensure sound repairs had been undertaken, then coating with red oxide primer, prior to customer collection and the journey back to Belgium!

For any Veteran and Vintage repairs, please contact us for a survey/quotation.

- Full Pressure Testing
- Full Crack Detection
- Fixed Cost Repairs
- Lloyds Welding Procedure
- Machining Facilities
- 12 Months Guarantee

*Breathing new life into
damaged cast iron components*
