Cast Iron Welding & Metal Stitching Repairs

## Maserati Block

We were contacted by a customer with an 8-cylinder block from a classic Maserati car who explained, *"We are hoping to replace all the liners and thought that as pairs they could be machined and then welded in place by you - you came highly recommended by Julian of Historics in Belgium"*.

With its instantly recognisable emblem of a trident, Maserati has been an Italian luxury vehicle manufacturer since it was established in 1914 in Bologna, up to present day.

The block was delivered to our Derbyshire workshop where repairs were carried out by way of our Lloyd's approved fusion welding procedure for cast iron, installing 4 liner blocks and completely welding both crank face and head face before crack testing, post weld machining, and then pressure testing to ensure sound repairs had been undertaken. Afterwards, the block was cleaned and given a coating of red oxide primer, before its final inspection and return to the customer

for full machining and refit.

For any veteran, vintage and classic repairs, please contact us for a survey/quotation.

- Full Pressure Testing
- Full Crack Detection
- Fixed Cost Repairs
- Lloyds Welding Procedure
- Machining Facilities
- 12 Months Guarantee

*Breathing new life into  
damaged cast iron components*
